DETAILED ACTION

Priority

1. The applicants are requested to amend the first sentence to state “claims the **benefit** of Provisional Application No. 60/082692” because **priority** claims are considered by the Office to be limited to parent nonprovisional applications under 35 U.S.C. § 120 and foreign applications under 35 U.S.C. § 119(a-d) (see MPEP 201.11 (B)).
2. This application discloses and claims only subject matter disclosed in prior Application No. PCT/IB99/00734, filed 22 April 1999, and names an inventor or inventors named in the prior application. Accordingly, this application may constitute a continuation or division. Should applicant desire to obtain the benefit of the filing date of the prior application, attention is directed to 35 U.S.C. 120 and 37 CFR 1.78.
3. Applicant has not complied with one or more conditions for receiving the benefit of an earlier filing date under 35 U.S.C. 120 as follows:

This application is claiming the benefit of a prior filed provisional application under 35 U.S.C. 119(e). Copendency between the current application and the prior application is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1631

5. Claims 5-7, 11, 14, 16, and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Chen et al.

The claims are drawn to a method of distinguishing between different classes of signals from microarray hybridization data by distinguishing between overlapping data signals. In some embodiments the data are processed to distinguish between outputs from mixtures of signals.

Chen et al. shows in figure 1 a microarray that comprises two differently labeled fluorescent samples hybridized to probes on the microarray. Chen et al. shows maximum likelihood estimation of coefficient of variations used to distinguish between the two differently fluorescent-labeled samples on pages 372-373. Table 4 lists significant changes in expression between the two samples that were detected by the method of Chen et al. that were not detected as significant by other prior art methods.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John S. Brusca whose telephone number is 703 308-4231. The examiner can normally be reached on M-F 8:30-5:00.
